Zayer Zero bed-type milling machine

Référence interne :

CARACTERISTIQUES:

The ZAYER ZERO embodies a new generation of bed-type machining centres designed to strike the ideal balance between precision, rigidity and industrial productivity. Developed for demanding production environments, it machines large, complex workpieces with remarkable stability and consistent quality.

Designed for heavy industrial applications and high-precision operations, the ZERO combines a robust structure with advanced CNC control technology. It guarantees excellent repeatability, a high metal removal capacity and full control of your machining processes. A reliable solution for a lasting improvement in your production performance.
