Zayer Tebas bridge-type milling machine

Référence interne :

CARACTERISTIQUES:

The ZAYER TEBAS range is a benchmark in gantry machining centres for very large workpieces that call for power, precision and stability. Designed for demanding industrial environments, it has a robust structure that can withstand intensive machining operations while guaranteeing consistent quality.

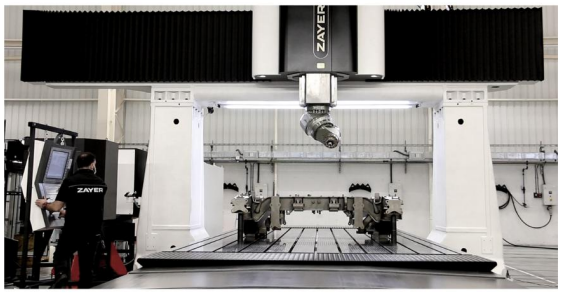

Designed to maximise productivity, the TEBAS series handles complex workpieces highly efficiently, cutting cycle times and delivering high long-term reliability. It is aimed at manufacturers looking for a high-performance solution for heavy, strategic applications.
