

Ultrix

Référence interne :

CARACTERISTIQUES:

The Breton Ultrix series combines milling and turning for medium to large parts made from titanium, steel, or composites with precision and efficiency. Featuring a tilting rotary table and vertical spindle, it is ideal for aerospace engine components. The flagship Ultrix E3 offers travels up to 1700x1700x1000 mm. With easy loading, a durable stainless steel work area, pressurized axes, and optimized accessibility, it ensures smooth and efficient operations. Automatic angular head changes enhance flexibility for diverse machining needs.
